Project Design Phase-II

Data Flow Diagram & User Stories

Data Flow Diagram:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

User Stories

In this table:

User Type: Represents different personas involved in the project (User and Admin). Functional Requirement (Epic): Describes the broader functionality or theme of the user stories.

User Story Number: Provides a unique identifier for each user story.

User Story / Task: Describes what the user wants or needs.

Acceptance Criteria: Outlines the conditions that must be met for the user story to be considered complete.

Priority: Indicates the importance or urgency of implementing the user story. **Release:** Specifies the release version or time frame when the user story is planned for implementation.

This table outlines user stories for both users (those taking the test) and administrators (those managing the system).

Use r	Functio nal	Us er	User Task/	Acceptance Criteria	Prio ri	Release
Ty pe	Require ment	Stor y Numbe	story		ty	
User	Authenticati on and Authorizati on	US00 1	As a user, I want to be able to log in securely	Users should be able to access a secure login page. Upon successful login, users should be granted access to the system.	High	Sprint-1
Admi	Authenticati on and Authorizati on	US002	As an admin, I want to manage user roles and permiss ion s	Admins should have access to a dedicated interface for managing user roles and permissions. Admins can add new users and assign them specific roles.	Med i um	Sprint-1
